

The Green Ship

Responsibility for Sustainability

WORLD OF COPPERNICKEL

EUCARO®

Environmentally Friendly Production

EUCARO has got a comprehensive sustainability concept which is firmly established in its strategic agenda.

This is not only applicable to our products but also to the way we manufacture our products.

The waste recycling and re-melting rate at the Bremen site, for example, is currently 99.7 percent - an impressive figure that is only possible with the full commitment of all staff .

Our Key Product Figures confirming credentials

- Copper Nickel 90-10 has a great long-life-cycle
-> Often our piping system exceeds the ships life time
- Copper Nickel 90-10 saves resources (Emission, Energy, Metal and Capital)
-> While regular piping systems need to be replaced ongoingly, our product lasts
- Copper Nickel 90-10 systems need no antifouling treatment due to it's antimicrobial properties
-> Minimising our carbon footprint on a natural way

EUCARO = a green showcase

By emphasizing on the natural characteristics of our alloy composition we permanently screen our production in order to improve the consumption

- Implementing solar panels on our roofs
-> Since 2009 we generate our own electricity (providing 360.000 kilowatt hours per year)
- Using 100% renewable electrical power in both Austrian sites
-> As the first and only Copper Producer worldwide, both mills operate clean and sustainable (saving about 18.000 tons CO₂)

Other features are returnable wooden cases, using natural lubrication e.g. organic-wax and reduced transport distances

EUCARO creates major economic asset
but generates ecological benefits at the
same time.

Firm Conviction
for our mutual future
